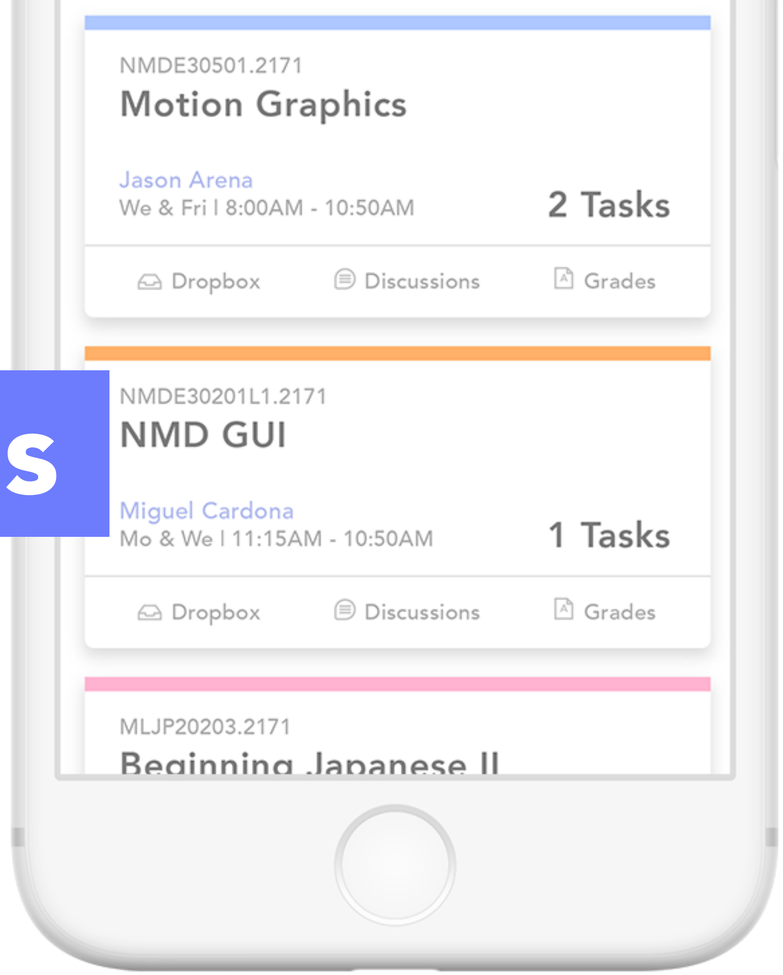
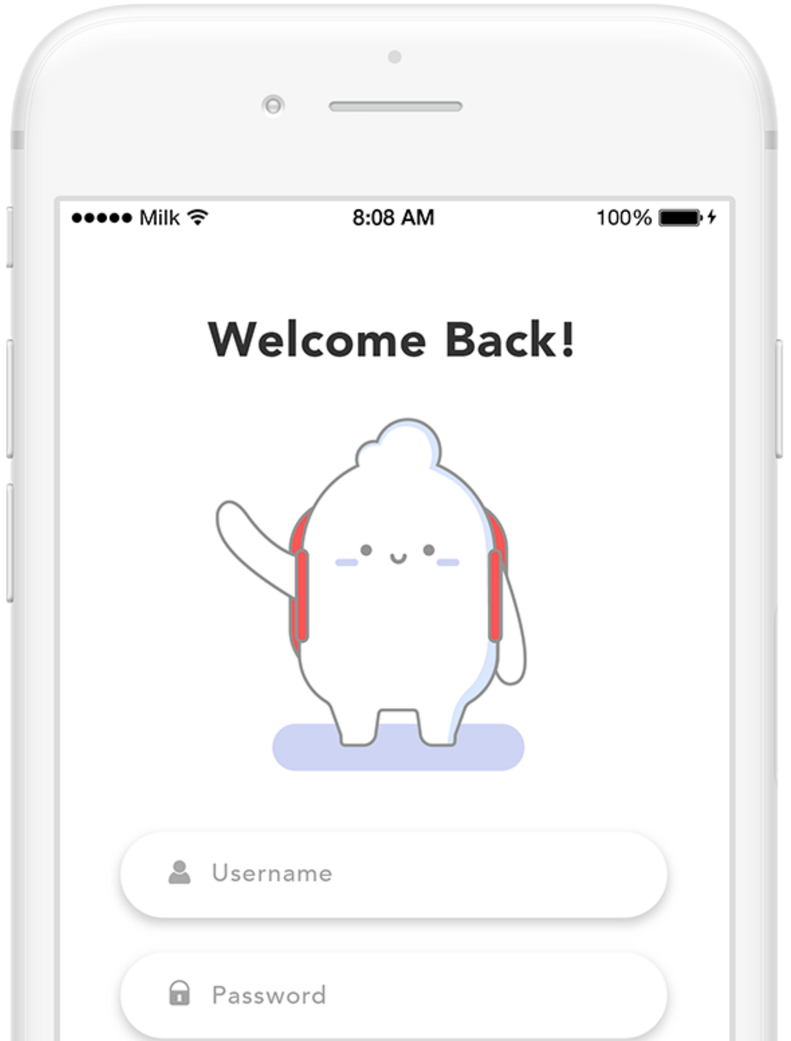
MyCourses
Mobile

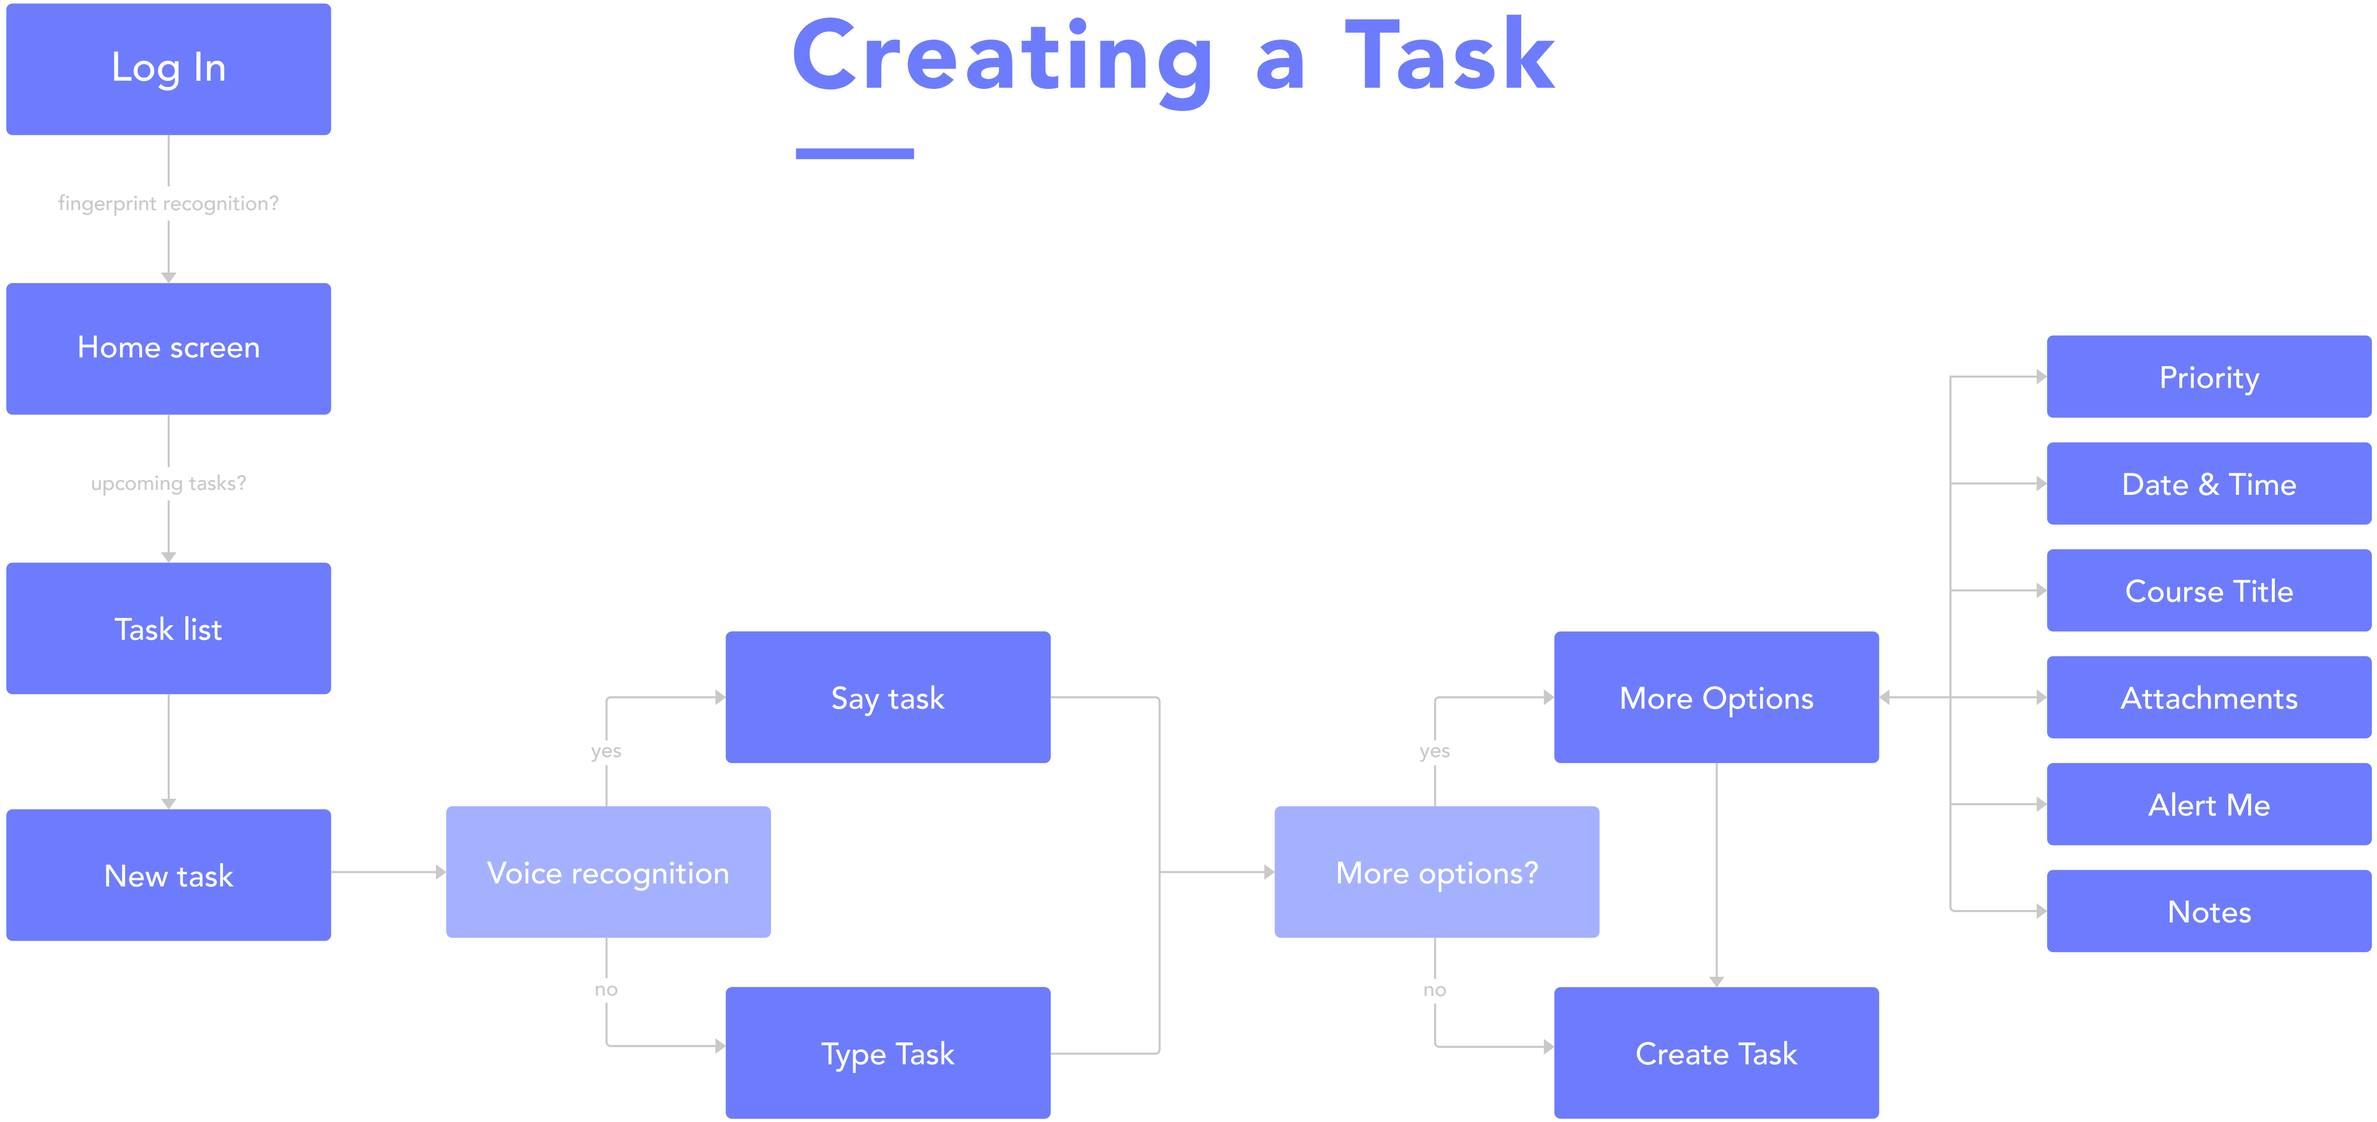




Statement

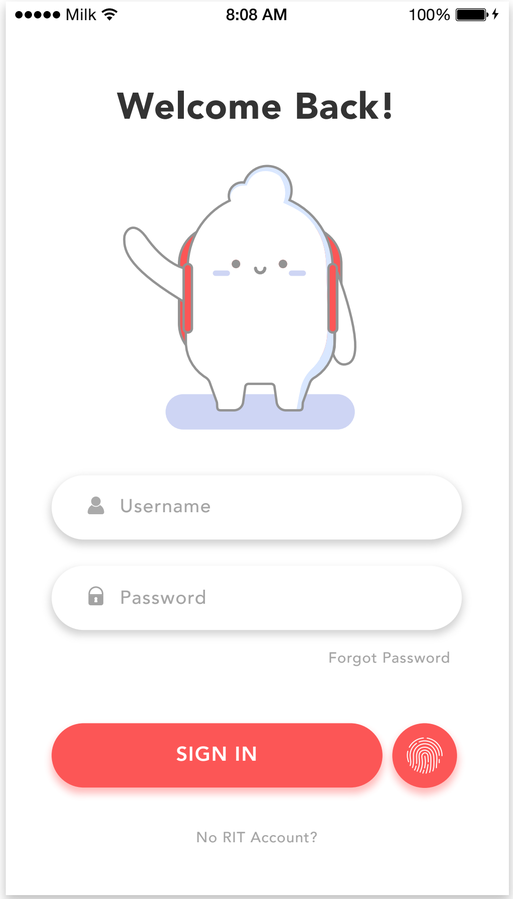
Students are often in a rush to get somewhere quickly which can lead to forgetting their tasks. The mobile MyCourses will accommodate for those forgetful moments. Students will easily be able to access MyCourses to be reminded of their tasks at hand and complete them in a timely manner.

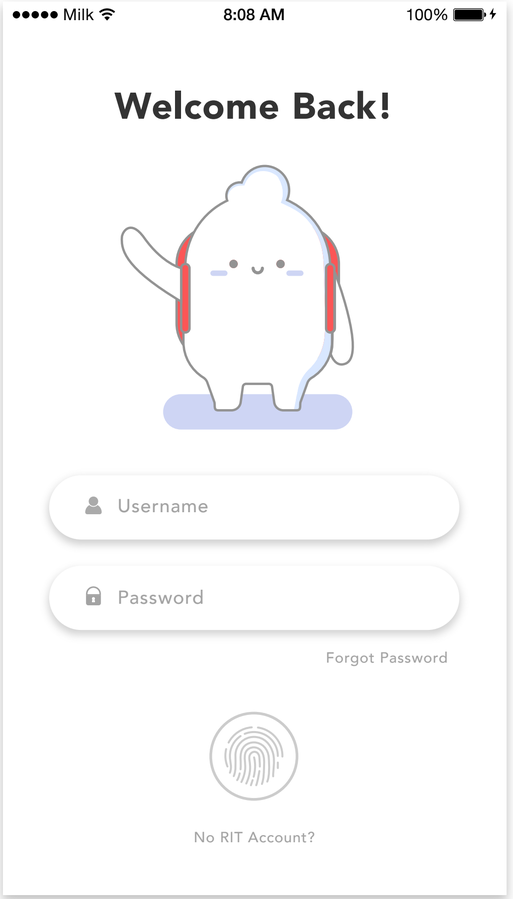
Creating a Task



Login Page

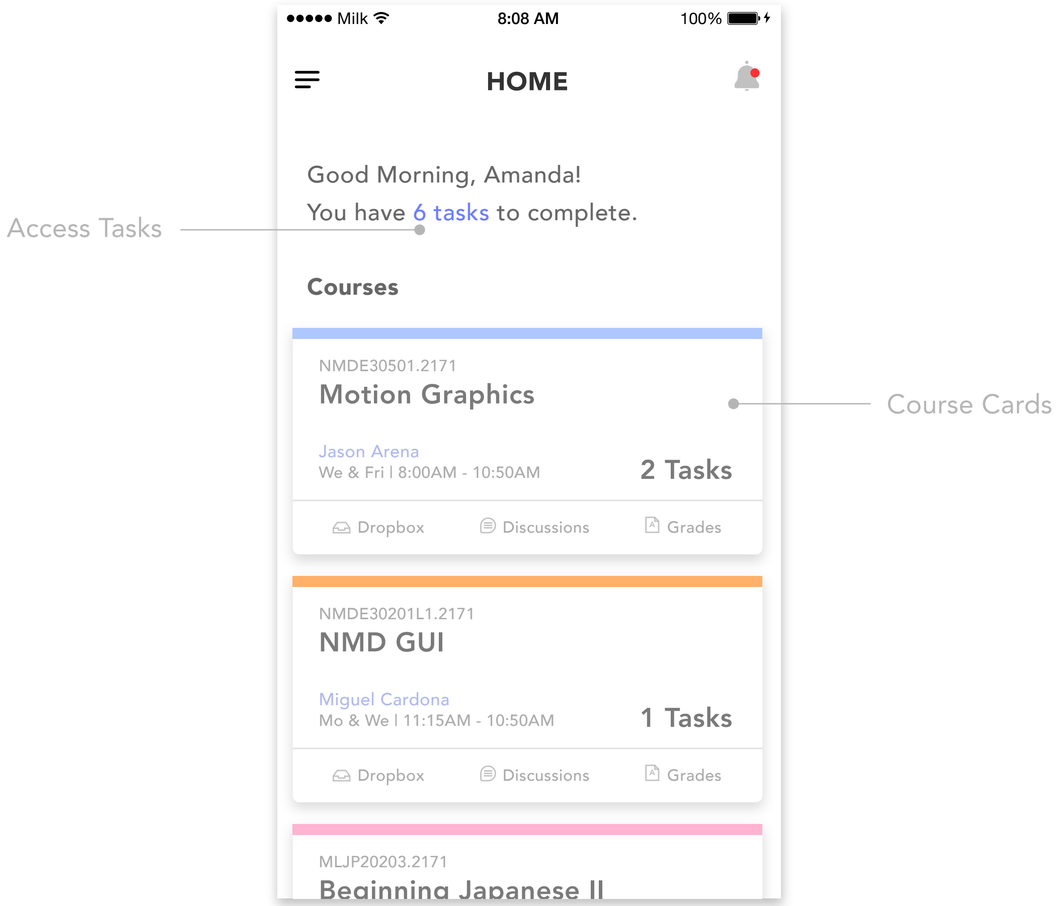
The login page gives users the option to type in their username and password information or use fingerprint recognition to sign in to myCourses. Students who frequently access myCourses from their devices will be able to sign in with ease with the use of fingerprint recognition.





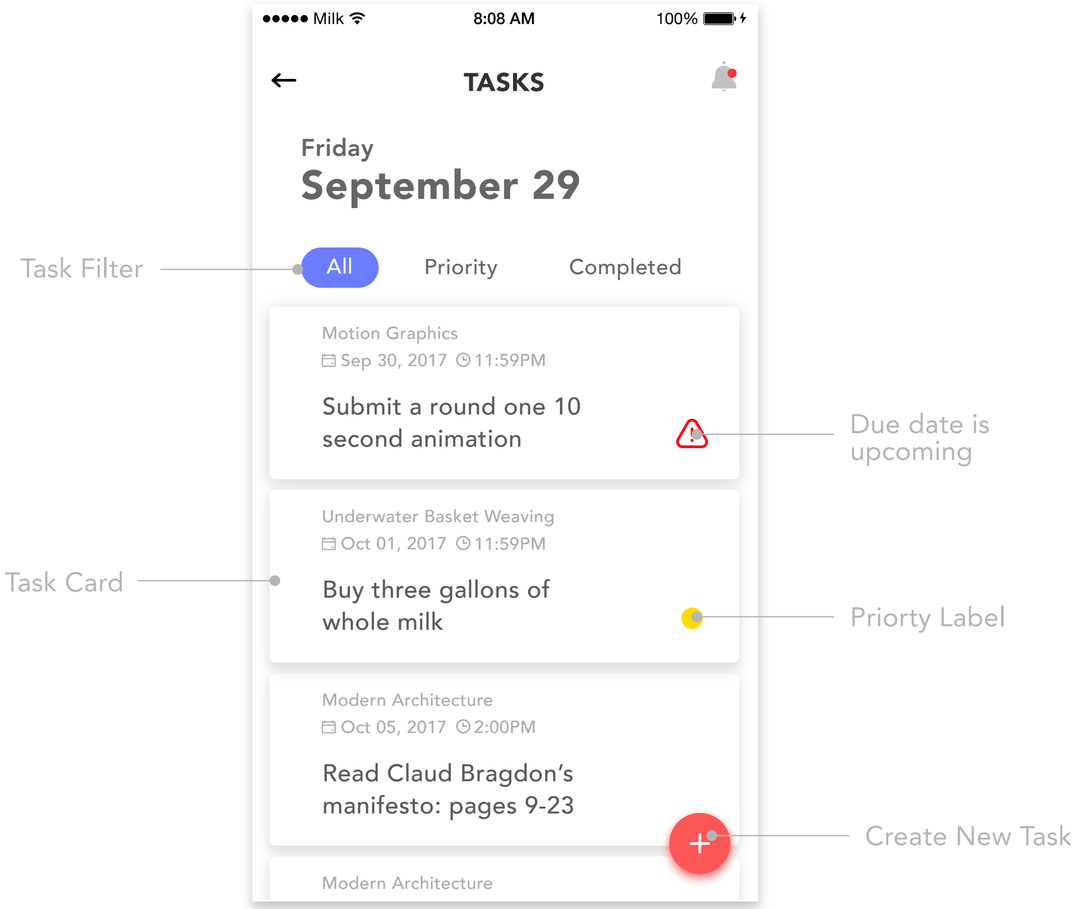
Home Screen

The home screen allows users to see how many tasks they currently have left to complete and quickly scan their courses.



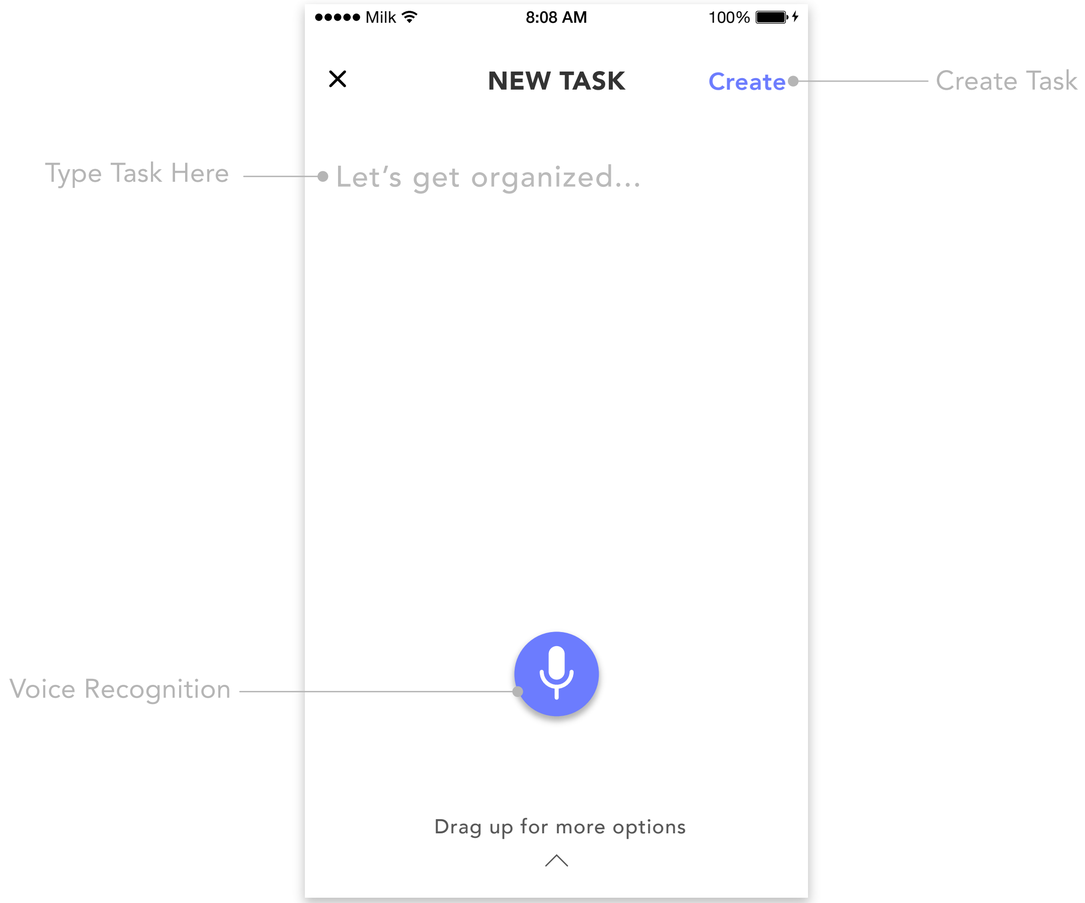
Tasklist

The tasklist allows users to quickly scan tasks that they have to complete. Tasks can be marked with priority labels which notify the user which tasks to prioritize. Tasks populate based on assignments that professors assign. Students may also create their own tasks.



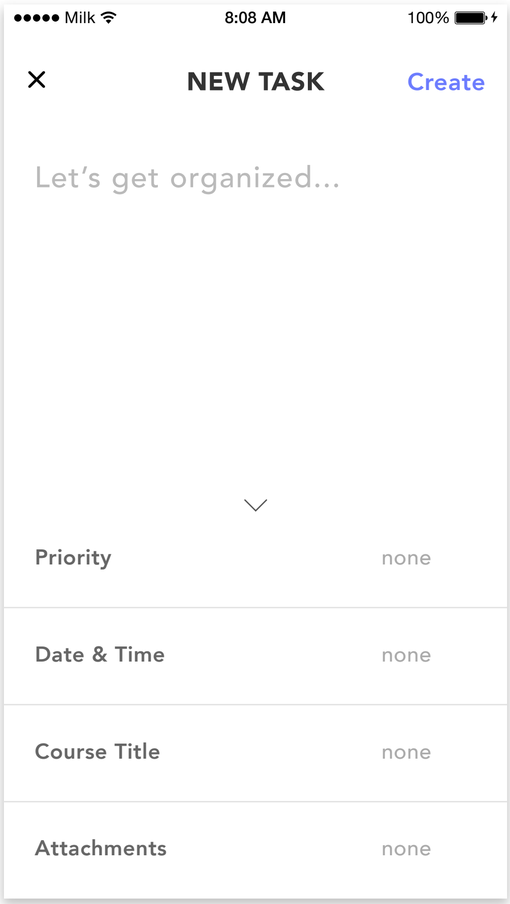
New Task

Upon creating a new task, users have the option to type or say a task. For users who are in a rush, saying a task allows them to quickly create a task. After the task is written, users can either create the task or swipe up for more options.



More Options

For users who would like to be more oraganized, there are options to better organize a task card. These options allow users to have more detailed task cards which give them more information at a glance.



Date & Time

Clicking on an option brings up menus from the bottom where users can define their exact specifications for the task.
